PROFILE

Software Development student and Full Stack Developer with experience in scalable SaaS platforms. Specialized in Astro 5, React 19, and Django. Awarded 1st Place at Samsung Innovation Campus (AI) and 1st Place at National JIC (Social Impact). Focused on efficient, secure code and modern architectures.

PROFESSIONAL EXPERIENCE

Full Stack Developer (Professional Internship)

Project: Control Panel for Digital Retail Management | January 2026 – Present

Led the development of critical modules for a SaaS platform for advertising management and IoT.

- High Performance Architecture:** Implemented a hybrid interface using **Astro 5 (SSR)** and **React 19**, optimizing initial load through "Island Architecture".
- Advanced Security (RBAC):** Designed an access control system with 5 hierarchical roles, ensuring data protection via JWT.
- Backend & Cloud:** Collaborated on the integration of a RESTful API with **Django REST Framework** and managed deployments on **Vercel/Railway**.
- Global State:** Utilized **Nanostores** for reactive state management and developed analytical dashboards for IoT monitoring.

Python Educational Content Developer

Curriculum design and programming instruction at secondary level.

- Progressive Curriculum:** Structured study plans from fundamentals to complex logic, ensuring an effective learning curve.
- Interactive Resources:** Developed practical workshops in **Google Colab** and technical guides to simplify abstract concepts.
- Audiovisual Material:** Produced explanatory content focused on resolving common errors in code learning.

AWARDS AND FEATURED PROJECTS

1st Place - Samsung Innovation Campus (AI)

Project: SmartHabit - Energy Monitoring | 2025

- Developed an AI model with TensorFlow capable of predicting energy and water consumption (1h-24h horizons).
- Implemented MAE/MAPE metrics to validate accuracy and an interactive dashboard for data visualization.

1st Place - JIC Nacional APANAC (Greater Social Impact)

Project: Amber Alert System | 2025

- Designed a massive alert system via Web Push (< 2 sec) eliminating the need for mobile apps.
- Built a secure administrative panel (Django/MySQL) and an optimized public interface for emergencies.

SKILLS

Frontend:

Astro 5, React 19, TypeScript, TailwindCSS.

Backend:

Python (Django/DRF), Node.js (Express), C#, SQL.

Data & AI:

TensorFlow, Pandas, NumPy, Google Colab.

Tools:

Git/GitHub, Docker, Vercel, Railway, Postman.

EDUCATION

Software Development & Management

Universidad Tecnológica de Panamá | 2022 – Present (4th Year)

Certification in Python & Data Analytics

Samsung Innovation Campus | 2025
